

Products from recycled plastic

Using Plate Press Machine

ScaleUpCycle Project

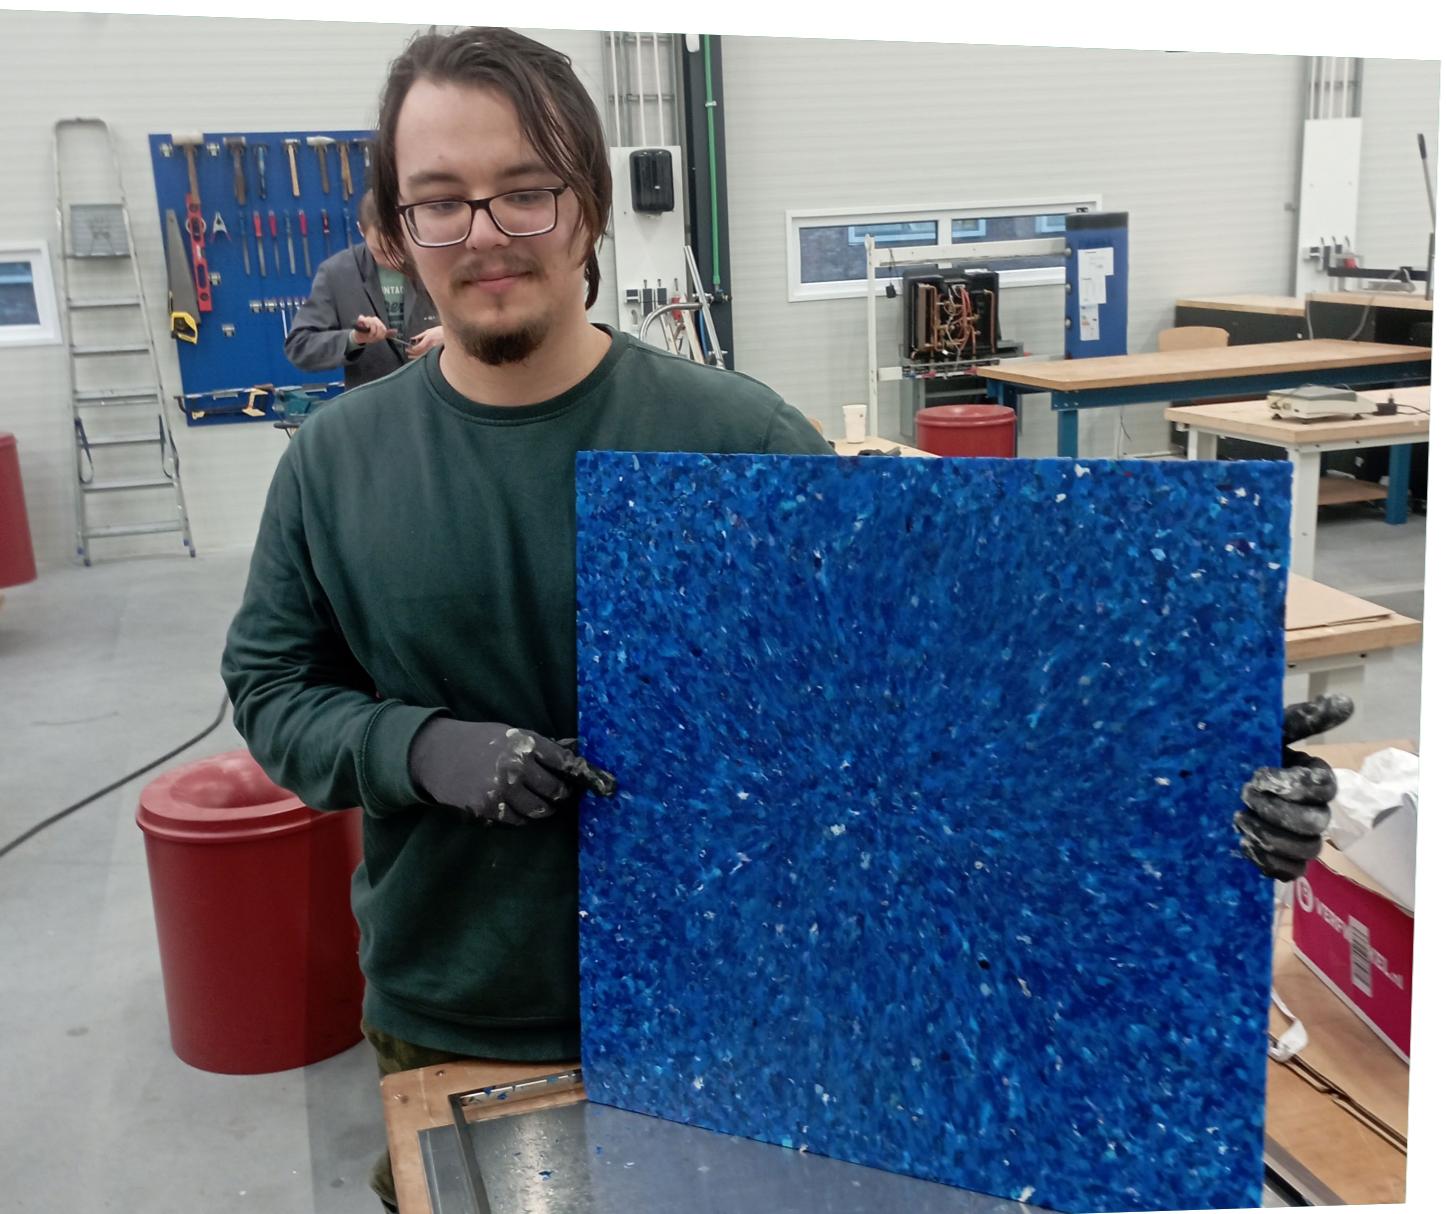

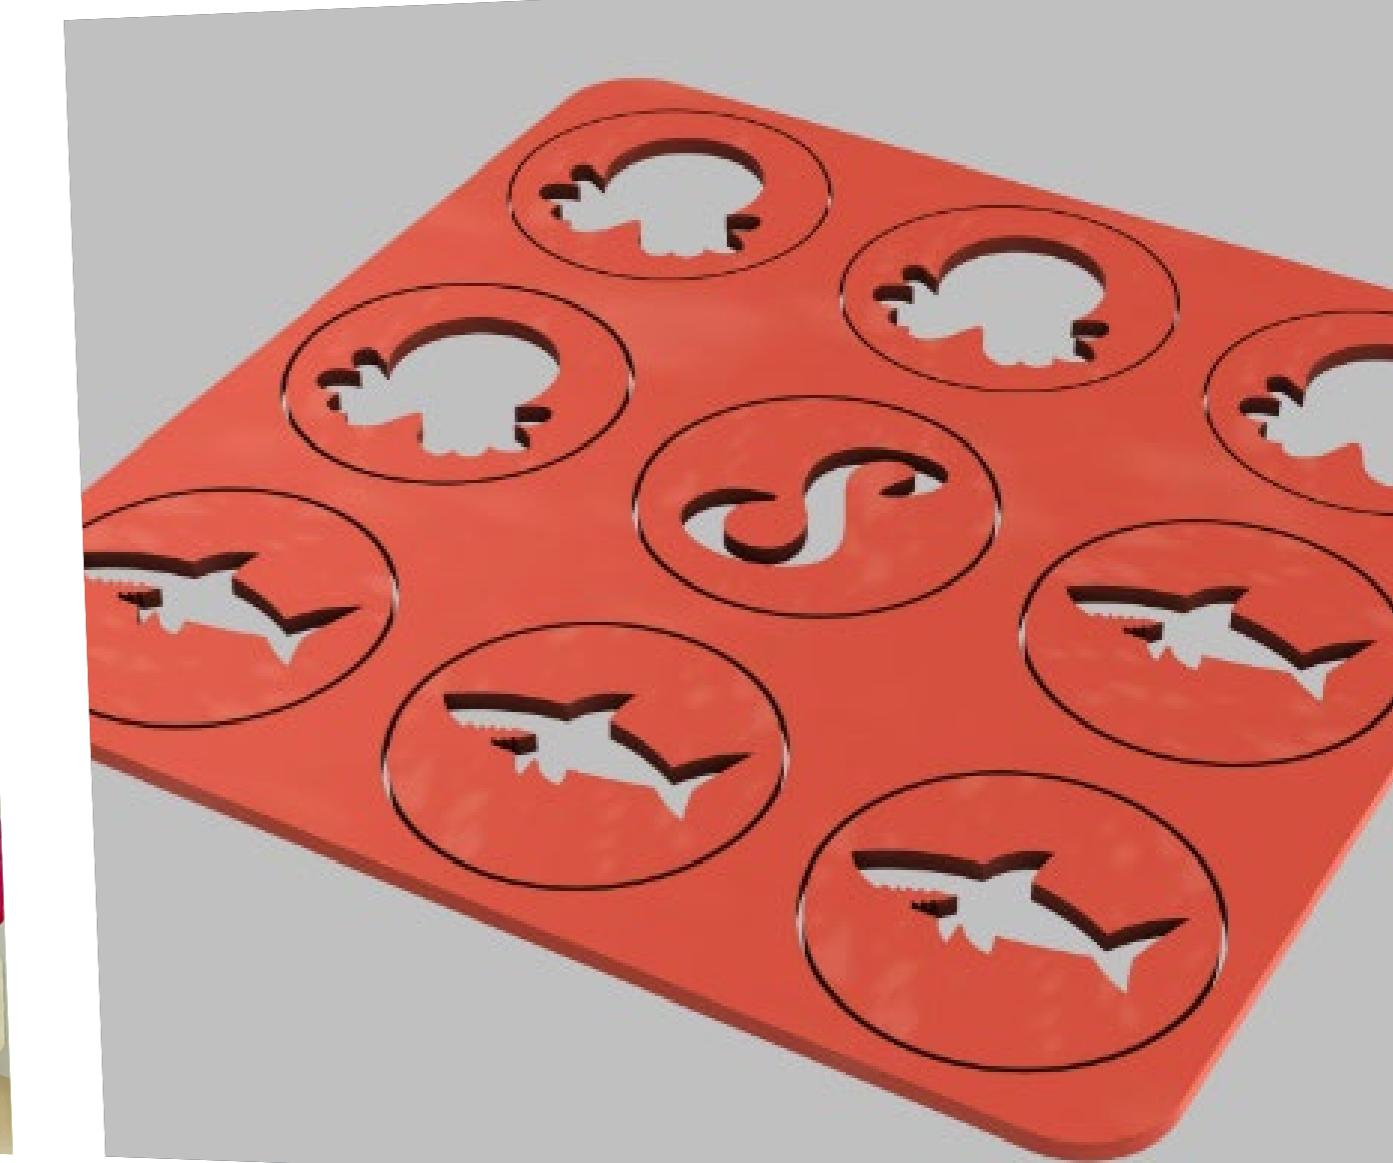

Presented at
KIVI Jaarcongres 2025

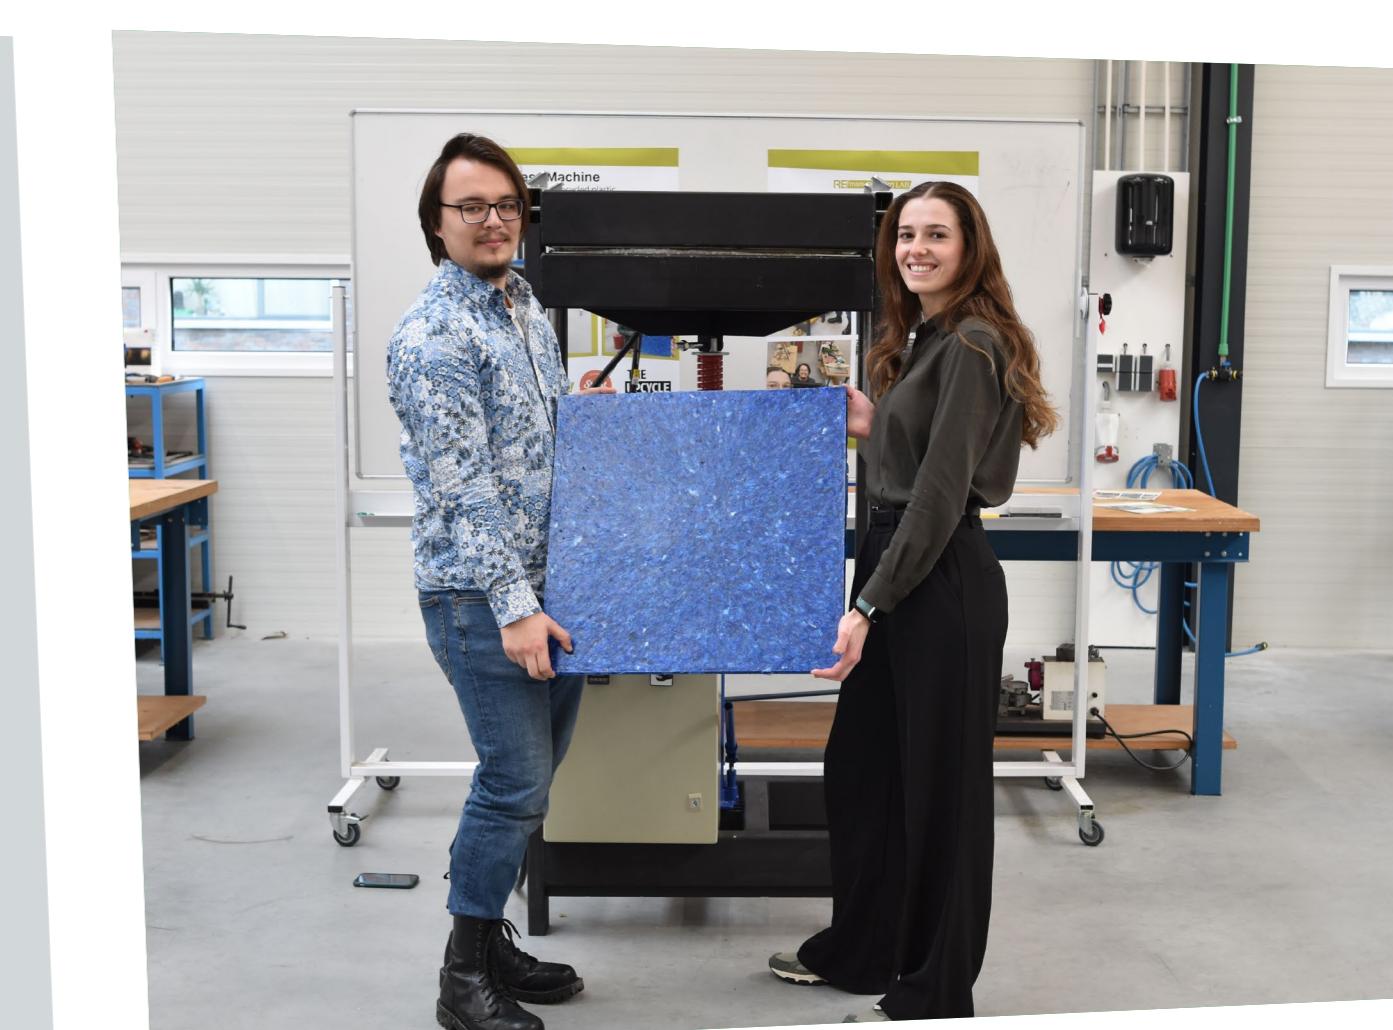

ScaleUpCycle project is dedicated to finding ways in which scraps and waste material can be re used and upcycled to higher quality material. The Plate press has been built to convert shredded plastic waste into solid sheets of plastic that can be cut and CNC machined into products.

State-of-the-art:
A continuation of this project is under development in cooperation with Returnclub of The Hague and Kringloop DenHaag in order to develop different new products.

A KIEM-ce 2023 subsidized project (Regieorganen SIA)
Project partners:
 STICHTING Stunt Sinds 2006 DELFT
